

Experience

A key component of our service to both our natural resource industry clients and landowners in general is retracement of public land system surveys. The quarter and quarter-quarter section legal is the basis for the majority of land and mineral rights transfers. The easements for access and pipelines are tied to this land system. ECS has Land Surveyors with licensure Florida, Texas, California, Colorado, Wyoming, Arizona, Nevada, Utah, Indiana and Kentucky with a minimum of a decade of licensure. ECS has state certificates of commercial practice in Montana, North Dakota, South Dakota, and Wyoming. We offer the full range of boundary survey services:

- Private, Commercial and Industrial Property Boundaries
- Well Location and Plats
- ALTA (a boundary survey with stringent requirements and specialized requirements)
- Right-of-Way and Easement Exhibits
- Land Subdivision, including Irregular Tracts and Auditor Lots
- Residential and Commercial Subdivision Development

Commitment

Whether the tract is an acre or 100 square miles, ECS utilizes the latest Trimble GNSS receivers and base units and conventional and robotic total stations to meet the cadastral surveying needs of any project. Our survey staff includes former BLM cadastral surveyors and professionals with either or both urban and rural boundary expertise.

Success

At ECS we take pride in our involvement in one of the basic building blocks of our society, property ownership. Our profession and ECS as a company do our best to serve our clients and the public as a whole in a way that resolves conflicts or the potential for conflicts regarding boundaries and chain of title. Our licensure as professional land surveyors is a privilege and not a right. We would consider it a privilege to discuss our qualifications and capabilities to perform your boundary survey project.
